

E-Commerce Order Management Database System

Weekly Assignment

Project Title: E-Commerce Order Management Database System

Week Assignment: Requirement Analysis and Customer Database Module

Submission Date: 08-08-2026 (Saturday)

1. Requirement Analysis

- Identify the purpose of the e-commerce system.
- Identify system users and their requirements.
- List functional and non-functional requirements.
- Identify the main entities such as Customer, Product, Order, Payment, and Delivery.
- Define relationships between the entities.

2. Customer Database Module

- Create the Customer table.
- Store customer details such as Customer ID, Customer Name, Email, Phone Number, Address, and Password.
- Define Primary Key and appropriate constraints.
- Implement basic operations such as Add, Update, Delete, and View Customer.
- Test the customer database with sample records.
